

NAGESHWAR

B.Tech Student — Computer Science & Software Development

[LinkedIn](#) | +91 6366046936 | [GitHub](#) | [Portfolio](#)

OBJECTIVE

IT and software development student with full-stack project experience across web applications, real-time systems, and applied security — backed by a 3rd place CTF finish and multiple shipped end-to-end projects. Seeking opportunities to build and ship reliable software.

EDUCATION

B.Tech, Computer Science (Cybersecurity) — NMAM Institute of Technology, Nitte University | Pursuing, CGPA: 7.78
Pre-University — Janatha Independent PU College, Karnataka Board | 2023, CGPA: 9.54

EXPERIENCE

Web Development Intern | MRPL — Remote/Hybrid

Jul 2026

- Built GovWatch AI, an AI-powered platform for monitoring government websites and documents for changes, in an agile, milestone-driven environment.
- Implemented core frontend and backend features, improving usability and reliability across the application.

Full Stack Web Developer Intern | Zephyr Technologies & Solutions (Hybrid)

Jun–Jul 2026

- Built and shipped multiple projects — portfolio sites, PHP applications, and MERN-stack apps — in a hybrid team setting.
- Worked directly with mentors to translate requirements into production-ready full-stack features.

PROJECTS

NetSentinel — Vulnerable Target App & Real-Time Intrusion Detection System

[GitHub Repository](#)

- Built a full-stack cybersecurity lab pairing a deliberately vulnerable web app (SQLi-exploitable login) with a secure counterpart, plus a real-time IDS detecting SQL injection, brute-force, port scanning, and HTTP flood attacks via a Socket.IO dashboard.
- Validated detection by scripting live attacks (Nmap, hping3, Python brute-force/SQLi) from a Kali Linux environment.

Technologies: Node.js, Express, Socket.IO, PostgreSQL, React, Vite, Nmap, hping3, Python

CipherX — Auto Decryption System for Classical Ciphers

[GitHub Repository](#)

- Built a full-stack app that auto-detects and decrypts classical ciphers (Caesar, Vigenère, Atbash, Affine, Substitution) via a Python API returning ranked, confidence-scored candidates, with a React frontend.
- Integrated language detection to improve ranking accuracy, and deployed the backend on Render with the frontend consuming it live.

Technologies: Python, Flask, React, Vite, langdetect, REST API

GovWatch AI — AI-Based Government Website & Document Change Monitoring Platform

- Built an AI-powered platform that monitors government websites/documents for changes, generating AI summaries and real-time alerts via web scraping, scheduled jobs, and document comparison.

Technologies: React.js, Node.js, Python, FastAPI, Playwright, Gemini API, PostgreSQL, Redis, Docker

ACHIEVEMENTS

- Secured 3rd Place (2nd Runner-Up) overall at Cybersiege 2026, a 24-hour CTF spanning web exploitation, cryptography, forensics, and misc categories (Alva's Institute of Engineering & Technology).
- Completed NPTEL certifications in Internet Crimes & Cyber Security, and Systems & Usable Security.
- Completed Microsoft AIInnovation 2025 Azure Learning Challenge — Cloud Computing and AI fundamentals.

SKILLS

Technical: Python, JavaScript, HTML, CSS, React.js, SQL, API Testing, Manual Testing

Security: OWASP Top 10, SQL Injection, XSS, VAPT Fundamentals, CTF-based Problem Solving

Core: Problem-Solving, Communication & Team Collaboration
